Floyd Kinney packs a lot of information into Fast Metabolism and Weight Loss. I don't know anything about the author and his background but he is clearly knowledgeable in matters related to health and fitness. Mr. Kinney painstakingly walks the reader through the intricacies of metabolism and its impact on one's weight, overall health and general outlook on life. He connects the dots for readers concerning the effects of nutrition, exercise, hormones, stress, age and lack of sleep on metabolism and how all of that ties both directly, and indirectly, to one's ability to achieve one's healthy weight goals. While some of Mr. Kinney's assertions I have read before, I have never seen the many pieces he touches upon woven together in such an intricate, yet understandable way. This is not just another boring, clinical, weight loss book – it is a comprehensive guide to understanding one's body and the myriad of factors that impact metabolism, weight, health, and ultimately one's happiness.

I'm a mother of three and I decided to purchase this book because I have developed a small muffin top. I enjoyed this material because it is down to earth and it takes you step by step as it goes into depth. I learned a lot of new information and I'm looking forward to losing the extra weight. I highly recommend this book to anyone who wants to lose weight and maintain a healthy lifestyle. This book is definitely a keeper.

It may be tempting to blame your metabolism for weight gain. But because metabolism is a natural process, your body has many mechanisms that regulate it to meet your individual needs. Only in rare cases do you get excessive weight gain from a medical problem that slows metabolism. Unfortunately, weight gain is complicated. It is likely a combination of genetic makeup, hormonal controls, diet composition, and the impact of environment on your lifestyle, including sleep, physical activity and stress. All of these factors result in an imbalance in the energy equation. You gain weight when you eat more calories than you burn – or burn fewer calories than you eat. While it is true that some people seem to be able to lose weight more quickly and more easily than others, everyone will lose weight when they burn up more calories than they eat. Therefore, to lose weight, you need to create an energy deficit by eating fewer calories or increasing the number of calories you burn through physical activity or both. The Author has discussed all the factors which affect metabolism and weight loss. Impressively written and it will update your information about metabolism. I highly recommend this book if you are looking for something similar.
