Quality Concepts For The Process Industry

Synopsis

Quality Concepts for the Process Industry prepares readers for a career as process plant operators. This book covers the classical concepts of quality control in a style and at a depth that should be acquired by all employees of the process industries. Each chapter of the text contains chapter objectives, thorough discussions of the concepts presented, a summary, and end-of-chapter review questions. There is a complete glossary of terms and a list of additional references in the back of the book. Important Notice: Media content referenced within the product description or the product text may not be available in the ebook version.

Customer Reviews

Originally I bought this book for a college course, and was happy to find information within it that expanded my thinking about quality within industries. The book goes very in-depth about quality, from the history about America's shift away from quality after WWII, to how quality is managed today, to all the little nuances that can affect quality in a system. The information was very well put together and reading through is enjoyable because of it. I do have one complaint about the book.

After each chapter, Michael Speegle(as always) has a review question section where you can test your learning of the most important parts of each chapter. Some of these review questions, I have found, cannot be answered at all or thoroughly enough just by reading the book. If Speegle deemed this information pertinent to a full understanding of the chapters subject, he should have included the information in his book.However there are only a few of those in the entire reading, the book is outstanding aside from that and highly recommended for anyone interested in quality concepts.

I like the fact that I was able to buy this textbook through at a reasonable price. The book is in excellent condition and was sent to me in a timely manner.

The product ordered was in terrific condition, just like the description said. I am very pleased with the product.
