Customer Reviews

I humbly submit my review: I've continued running for a few years but not until recently have I logged some serious mileage. I've had this book for a few years and read maybe 20 running books and quite a few of the running magazines. Now, that I am devoting more time to it; I've got to say this is one of the best books out there, my copy dated 1976 is an absolute classic. The best thing that I found in this book was the tip of putting brewer's yeast into my diet. There are so many "health foods" out there, miso, algaes like spirulina, bee pollen etcetera but brewer's yeast is one of the best energizers around. Sure I'd heard about it but was not informed on it's benefits. That is just one example of the many helpful ideas this book has. As far as "How to" books, it is up there with "The complete book of running" and "New York Runners Club Marathon Book."

I was perusing my local book store, when they had such places, in 1987 when I happened to pick up "The Joy of Running" in the sports section. I was 33 yrs old and desperate for peace of mind in my crazy life. I read that many had begun to run for emotional and mental health as well as for the body. Running looked like it could be my answer. Read the book and ran my first mile on a Sunday. My life is still crazy but 26 yrs and 30,000 miles later, running has made my life (and me) much more bearable.

Worth reading. Thaddeus Kostrubala MD, a psychiatrist who left a thriving practice in Maine moved to San Diego in 1971. Thaddeus started running because his cardiologist prescribed it. He did not really like the idea of exercise. He was overweight, drank heavily and was self-absorbed. Soon afterward starting running, he was running marathons. He also was offering running therapy for his patients who were willing to try it. He published the Joy of Running in 1976. It sold over a million copies!

I read this many years ago, and still wonder why it hasn't had more of an impact on the field of psychology. It's written by a psychologist and documents the exceptional impact that raising people's activity level through running can have on a spectrum of psycho-social disorders. In our medication laden age, I wish more people would recognize how controlling our own physiology can go a long way toward actual cures. This book documents the validity in that approach.
